The pelvic organs include the vagina, uterus, bladder, urethra, and rectum. These organs are held in place by muscles of the pelvic floor. Layers of connective tissue also give support. Pelvic organ prolapse (POP) occurs when tissue and muscles can no longer support the pelvic organs and they drop down.

~~Pelvic Support Problems | ACOG~~

If you have frequent or persistent symptoms of ovarian cancer, you may have a physical exam, including a pelvic exam. An imaging test of the ovaries, such as a transvaginal ultrasound exam, may be done. If a growth is found on an ovary, your ob-gyn may order a blood test to measure your CA 125 level. CA 125 sometimes is increased in women with ovarian cancer.
