In response to the coronavirus disease 2019 (COVID-19) pandemic and the societal disruption it has brought, national governments and the international community have invested billions of dollars and immense amounts of human resources to develop a safe and effective vaccine in an unprecedented time frame. Vaccination against this novel coronavirus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), offers the possibility of significantly reducing severe morbidity and mortality and transmission when deployed alongside other public health strategies and improved therapies. Health equity is intertwined with the impact of COVID-19 and there are certain populations that are at increased risk of severe illness or death from COVID-19. In the United States and worldwide, the pandemic is having a disproportionate impact on people who are already disadvantaged by virtue of their race and ethnicity, age, health status, residence, occupation, socioeconomic condition, or other contributing factors. Framework for Equitable Allocation of COVID-19 Vaccine offers an overarching framework for vaccine allocation to assist policy makers in the domestic and global health communities. Built on widely accepted foundational principles and recognizing the distinctive characteristics of COVID-19, this report's recommendations address the commitments needed to implement equitable allocation policies for COVID-19 vaccine.

**WHEN IT COMES TO INVESTING FOR YOUR FUTURE, THERE'S ONLY ONE SURE BET—ASSET ALLOCATION THE EASY WAY TO GET STARTED** Everything You Need to Know About How To: Implement a smart asset allocation strategy Diversify your investments with stocks, bonds, real estate, and other classes Change your allocation and lock in gains Trying to outwit the market is a bad gamble. If you're serious about investing for the long run, you have to take a no-nonsense, businesslike approach to your portfolio. In addition to covering all the basics, this new edition of All About Asset Allocation includes timely advice on: Learning which investments work well together and why Selecting the right mutual funds and ETFs Creating an asset allocation that ' s right for your needs Knowing how and when to change an allocation Understanding target-date mutual funds "All About Asset Allocation offers advice that is both prudent and practical--keep it simple, diversify, and, above all, keep your expenses low--from an author who both knows how vital asset allocation is to investment success and, most important, works with real people." -- John C. Bogle, founder and former CEO, The Vanguard Group "With All About Asset Allocation at your side, you'll be executing a sound investment plan, using the best materials and wearing the best safety rope that money can buy." -- William Bernstein, founder, EfficientFrontier.com, and author, The Intelligent Asset Allocator

This is an extract from the 4-volume dictionary of economics, a reference book which aims to define the subject of economics today. 1300 subject entries in the complete work cover the broad themes of economic theory. This volume concentrates on the topic of allocation information and markets.

This book develops allocation mechanisms that aim to ensure an efficient resource allocation in modern IT-services. Recent methods of artificial intelligence, such as neural networks and reinforcement learning, and nature-oriented optimization methods, such as genetic algorithms and simulated annealing, are advanced and applied to allocation processes in distributed IT-infrastructure, or grid systems.

The use of modern planning and optimization systems for process synchronization in value networks requires the optimal information exchange between the entities involved. The central focus of Sven Grolik's study is the development of efficient mechanisms for the coordination of information allocation by the example of interconnected transportation marketplaces. Unlike traditional information allocation algorithms, the algorithms developed in his analysis are based on update mechanisms which maintain a weak consistency of replicated information in the network. Sven Grolik shows that these algorithms enable savings concerning the update costs as well as increase the performance within the network, but at the same time guarantee compliance with quality of service levels concerning the currency of information. The focus of this work is the development of decentralized, online algorithms which make a logically distributed computation possible on the basis of local information. The development of these innovative algorithms is based on approaches of multi-agent system theory as well as distributed simulated annealing techniques.

Since the formalization of asset allocation in 1952 with the publication of Portfolio Selection by Harry Markowitz, there have been great strides made to enhance the application of this groundbreaking theory. However, progress has been uneven. It has been punctuated with instances of misleading research, which has contributed to the stubborn persistence of certain fallacies about asset allocation. A Practitioner's Guide to Asset Allocation fills a void in the literature by offering a hands-on resource that describes the many important innovations that address key challenges to asset allocation and dispels common fallacies about asset allocation. The authors cover the fundamentals of asset allocation, including a discussion of the attributes that qualify a group of securities as an asset class and a detailed description of the conventional application of mean-variance analysis to asset allocation.. The authors review a number of common fallacies about asset allocation and dispel these misconceptions with logic or hard evidence. The fallacies debunked include such notions as: asset allocation determines more than 90% of investment performance; time diversifies risk; optimization is hypersensitive to estimation error; factors provide greater diversification than assets and are more effective at reducing noise; and that equally weighted portfolios perform more reliably out of sample than optimized portfolios. A Practitioner's Guide to Asset Allocation also explores the innovations that address key challenges to asset allocation and presents an alternative optimization procedure to address the idea that some investors have complex preferences and returns may not be elliptically distributed. Among the challenges highlighted, the authors explain how to overcome inefficiencies that result from constraints by expanding the

optimization objective function to incorporate absolute and relative goals simultaneously. The text also explores the challenge of currency risk, describes how to use shadow assets and liabilities to unify liquidity with expected return and risk, and shows how to evaluate alternative asset mixes by assessing exposure to loss throughout the investment horizon based on regime-dependent risk. This practical text contains an illustrative example of asset allocation which is used to demonstrate the impact of the innovations described throughout the book. In addition, the book includes supplemental material that summarizes the key takeaways and includes information on relevant statistical and theoretical concepts, as well as a comprehensive glossary of terms.

Fundamental changes must take place in how water is allocated, planned, and managed if India's goals for continued economic growth and improved social and environmental conditions are to be met. India's needs are especially severe due to its rapidly developing water constraints, environmental problems, huge population, regional inequalities in water availability along with the federal administrative structure and rapid demographic and economic growth. The findings of 'Inter-Sectoral Water Allocation, Planning and Management' are that a comprehensive approach is needed in order to implement change. The book provides detailed recommendations in the areas of policy making, legislation and regulations, institutions, economic incentives, technology, and public information.

This book provides an overview of existing methods for allocating costs and benefits. It will help readers evaluate the pros and cons of various methods involved in terms of factors such as fairness, consistency, stability, monotonicity and manipulability.

This report contains 23 studies which examine the initial allocations of transferable fishing quotas by a variety of fisheries management regimes. The case studies include accounts from the UK, the Netherlands, Iceland, Canada, United States, South Africa, Australia and New Zealand.
