The length of the antenna, from equation 3 is $9.48 \text{ ft} \times 50.1 \times 0.965 = 492 \text{ inches}$ or $9 \text{ ft } 53/4 \text{ inches}$. The answer is obtained directly in inches by substitution in equation 4 $113.7 \text{ inches} \times 50.1 \times 0.965 = 5904 \text{ inches}$. The length of a half-wave antenna is also affected by the proximity of the dipole ends to nearby conductive and semiconductive objects.
