Computer-aided detection (CADE) and computer-aided diagnosis (CADx) are emerging technologies to help radiologists interpret medical images. In screening mammography, CADE can help radiologists avoid overlooking a cancer, while CADx can help radiologists decide whether a biopsy is warranted when reading a diagnostic mammogram.

Computer-aided Detection and Diagnosis | SpringerLink

Computer-aided detection (CADE), also called computer-aided diagnosis (CADx), are systems that assist doctors in the interpretation of medical images. Imaging techniques in X-ray, MRI, and ultrasound diagnostics yield a great deal of information that the radiologist or other medical professional has to analyze and evaluate comprehensively in a short time.

Computer-aided diagnosis - Wikipedia

To attain a more reliable and accurate diagnosis, recently, varieties of computer-aided detection (CAD) and diagnosis (CADx) approaches have been developed to assist interpretation of the medical images. At least four types, denoted as Types I–IV, of efforts may be identified among these CAD and CADx approaches.

Computer-Aided Detection and Diagnosis in Medical Imaging

According to the recently published Food and Drug Administration (FDA) guidance , computer-aided detection (CADe) devices are computerized systems intended to identify, mark, highlight, or in any other manner direct attention to portions of an image, or aspects of radiology device data, that may reveal specific abnormalities during interpretation of patient radiology images or patient radiology device data by the clinician, while the computer-aided diagnosis (CADx) devices include those that ...

The Role of Computer-aided Detection and Diagnosis System ...

Computer-aided detection (CADe) and computer-aided diagnosis (CADx) are systems that incorporate a computer's ability to learn and perform specific tasks. Through advances in machine learning and deep learning methodology, computers can now learn and perform specific endoscopic tasks that previously were the responsibility of the endoscopist.

The purpose of this paper is to provide an overview of recent advances in the development of CAD systems and related techniques. We begin with a brief introduction to some basic concepts related to breast cancer detection and diagnosis.

Computer-Aided Detection and Diagnosis of Breast Cancer ...

Mammography is currently the most powerful technique for early detection of breast cancer. To assist radiologists to better interpret mammogram images, computer-aided detection and diagnosis (CAD) systems have been proposed. This paper proposes a complete CAD system for mass detection and diagnosis, which consists of four steps. The first step consists of the preprocessing where the image is ...

Computer-aided diagnosis and artificial intelligence in clinical imaging. Computer-aided diagnosis (CAD) is rapidly entering the radiology mainstream. It has already become a part of the routine clinical work for the detection of breast cancer with mammograms. The computer output is used as a "second opinion" in assisting radiologists' image interpretations.

With the introduction of computer-aided detection (CAdE) devices, a one-arm sequential study design has been introduced that is intended to mimic the IFU of some CAdE devices. The CAdE IFU referred to here is a sequential one: after the reader makes his or her standard-practice read, the CAdE marks are displayed to indicate additional suspicious locations for the reader to consider.
