Thurlow, C. (ed.). (2009). Young People, Mediated Discourse and Communication Technologies. Special issue of the Journal of Computer Mediated Communication, 14 (4).

This title offers students a task-based introduction to the nature of computer-mediated communication and the impact of the internet on social interaction and hence on identities, relationships and communities.

This is a uniquely friendly and easy-to-understand treatment of the complex theories and findings that surround CMC. Communication is often complicated, and computerization makes it stranger still, yet the authors have deftly demystified both the miraculous and the mundane of computer-mediated interaction.

This book offers students a task-based introduction to Computer-Mediated Communication and the impact of the internet on social interaction. Divided into four parts which require students to learn, (theory), critique, (current issues), explore, (methods), and reflect, (practice), the book aims to: Provide a foundation to the social and communicative nature of information and communication technologies Enable students to engage with the key theoretical issues associated with CMC Equip students with the necessary research and technical skills as a stimulus to independent enquiry. In spite of the rapidly increasing interest in Internet Studies and CMC and the introduction of many university courses in the area, no specialised, introductory textbook exists. This coursebook responds to the need for such a text. Aimed primarily at communication students, this book would also be useful as a sourcebook for students of media, sociology, psychology and English Language Studies. Companion website resources can be found at <http://crispinthurlow.net/cmc/>

Excerpt Open publication The present handbook provides an overview of the pragmatics of language and language use mediated by digital technologies. Computer-mediated communication (CMC) is defined to include text-based interactive communication via the Internet, websites and other multimodal formats, and mobile communication. In addition to 'core' pragmatic and discourse-pragmatic phenomena the chapters cover pragmatically-focused research on types of CMC and pragmatic approaches to characteristic CMC phenomena. As a major economic, relational, and identity resource, communication is crucial to the well-being and success of young people. And yet adolescents are typically characterized in the media as inadequate communicators, whose language practices adults bemoan as unintelligible and deleterious. In looking to critique these pervasive stereotypes, the editors of Talking Adolescence have brought together some of the world's leading experts on youth and adolescence, whose interdisciplinary research demonstrates how communication powerfully structures and meaningfully facilitates the lives of young people. Adding to the growing literature on intergenerational and lifespan communication, Talking Adolescence is the first substantive volume devoted to young people.

Elite Discourse examines how language and communication – or just discourse – define, mediate and legitimize class privilege. It does so from the perspective of those people and places who often stand to gain most from inequality. Collectively, chapters consider language and communication that is elitist in its appeal to distinction, excellence and superiority; they also describe the ways in which various groups and institutions lay claim to 'eliteness' as a way to position themselves (or to be positioned by others) as elite or non-elite. As such, chapters are concerned as much with discourse about elite status as they are with the discourse of elites – those groups commonly defined by their material wealth, political control, or demographic rarity. Ultimately, Elite Discourse views 'elite' as something we do, rather than something we necessarily have or are. Indeed, elite status and eliteness point us to the rhetorical strategies by which many people differentiate themselves and by which they access symbolic-material resources for shoring up their status, privilege and power. This book was originally published as a special issue of Social Semiotics.

Our everyday lives are increasingly being lived through electronic media, which are changing our interactions and our communications in ways that we are only beginning to understand. In Discourse 2.0: Language and New Media, editors Deborah Tannen and Anna Marie Trester team up with top scholars in the field to shed light on the ways language is being used in, and shaped by, these new media contexts. Topics explored include: how Web 2.0 can be conceptualized and theorized; the role of English on the worldwide web; how use of social media such as Facebook and texting shape communication with family and friends; electronic discourse and assessment in educational and other settings; multimodality and the "participatory spectacle" in Web 2.0; asynchronicity and turn-taking; ways that we engage with technology including reading on-screen and on paper; and how all of these processes interplay with meaning-making. Students, professionals, and individuals will discover that Discourse 2.0 offers a rich source of insight into these new forms of discourse that are pervasive in our lives.

Chapters cover a range of communicative contexts (journalism, gaming, tourism, leisure, performance, public debate), communicators (professional and lay, young people and adults, intimates and groups), and languages (Irish, Hebrew, Chinese, Finnish, Japanese, German, Greek, Arabic, and French).

Landscapes generate meaning and impact on three major areas of scholarly interest: language and visual discourse, spatial practices and global capitalism.

The first dedicated volume of its kind, Visualizing Digital Discourse brings together sociolinguists and discourse analysts examining the role of visual communication in digital media. The volume showcases work from leading, established and emerging scholars from across Europe, covering a diverse range of digital media platforms such as messaging, video-chat, gaming and wikis; visual modalities such as emojis, video and layout; methodologies like discourse analysis, ethnography and conversation analysis; as well as data from different languages. With an opening chapter by Rodney Jones, the volume is organized into three parts: Besides Words and Writing, The Social Life of Images, and Designing Multimodal Texts. From the perspective of these broad domains, chapters tackle some of the major ideological, interactional and institutional implications of visuality for digital discourse studies. The first part, beginning with a co-authored chapter by Crispin Thurlow, focuses on micro-level visual practices and their macro-level framing – all with particular regard for emojis. The second part, beginning with a chapter from Sirpa Leppänen, examines the ways visual resources are used for managing personal relations, and the wider cultural politics of visual representation in these practices. The third part, beginning with a chapter by Hartmut Stöckl, considers organizational contexts where users deploy visual resources for more transactional, often commercial ends.
