Similarly, dry soil weight = 1400 g
Mass of water (M_w) = 1700 g – 1400 g = 300 g

Volume of water (V_w) = 300 cm³

Gravimetric moisture content (W) = 300 g / 1400 g = 0.214 kg/kg or 21.4%

Volumetric moisture content (θ) = 300 cm³ / 1000 cm³ = 0.30 cm³ / cm³ or 30%

Volume of solids = mass / density = 1400

Soil physics is the study of the solid, liquid,

and gaseous phases of soils and of fluxes of fluids and energy in soils. The solid phase consists of mineral and organic matter.

The dominant liquid in soils is water, and the dominant gases are similar to those in the atmosphere, except that soils contain more CO₂ and water vapor and less O₂.
