Pre loading technique of ground improvement: In 1940 ' s the technique of pre loading was developed and is mainly was used in the projects connected to highways. But now a days this technique was found very useful and is used for a variety of projects such as buildings, storage tanks, flood control structures and airfield etc. the draw back of this technique is that it does not provide favorable results for the structures having heavy concentrated loads.

One of the commonly used soil improvement methods for soft clay is vacuum preloading. This method has been successfully used in a number of countries for land reclamation and soil improvement work (Holtz, 1975; Chen and Bao, 1983; Choa, 1990; Jacob et al., 1994; Bergado et al., 1998; Chu et al., 2000). Sand drains and, more recently, prefabricated vertical drains (PVDs) have often been used to distribute vacuum load and discharge pore water.
