The authors propose the science curriculum concept of Global Science Literacy justifying its use internationally with reference to the nature of science, the probable direction of science in the new millennium, the capability for GSL to develop inter-cultural understanding, and its relevance to non-Western cultures and traditions. GSL curricula are organized conceptually rather than by science discipline, include objectives from the social studies construct of global education, and represent the broad spectrum of science methodologies, not just those of the physical sciences typical of current curricula. The book is recommended reading for all who are interested in the future of science curricula and interested in considering a non-traditional viewpoint. Curriculum developers and researchers, future teachers and graduate students in general curriculum courses, science education courses and social studies education courses, and their professors should be particularly interested. The book is divided into three sections. In the first section, the concept of Global Science Literacy and the justification of its use for science curricula internationally are developed. The second section describes learning environments that are especially appropriate for GSL curricula. The third and last section provides ideas and approaches for developing aspects of GSL curricula.

Describes applications in medicine, automobile features, transportation, home entertainment, athletics, household applications, information processing, detection devices, camera technology, and many more. \* Contains numerous discussions and examples that focus on human physiology, including muscle forces, blood pressure, the refraction of light by the eye, and many others.

High school and the difficult terrain of sexuality and gender identity are brilliantly explored in this smart, incisive ethnography. Based on eighteen months of fieldwork in a racially diverse working-class high school, *Dude, You're a Fag* sheds new light on masculinity both as a field of meaning and as a set of social practices. C. J. Pascoe's unorthodox approach analyzes masculinity as not only a gendered process but also a sexual one. She demonstrates how the "specter of the fag" becomes a disciplinary mechanism for regulating heterosexual as well as homosexual boys and how the "fag discourse" is as much tied to gender as it is to sexuality.

This second edition of Project-Based Learning (PBL) presents an original approach to Science, Technology, Engineering and Mathematics (STEM) centric PBL. We define PBL as an “ ill-defined task with a well-defined outcome, ” which is consistent with our engineering design philosophy and the accountability highlighted in a standards-based environment. This model emphasizes a backward design that is initiated by well-defined outcomes, tied to local, state, or national standard that provide teachers with a framework guiding students ’ design, solving, or completion of ill-defined tasks. This book was designed for middle and secondary teachers who want to improve engagement and provide contextualized learning for their students. However, the nature and scope of the content covered in the 14 chapters are appropriate for preservice teachers as well as for advanced graduate method courses. New to this edition is revised and expanded coverage of STEM PBL, including implementing STEM PBL with English Language Learners and the use of technology in PBL. The book also includes many new teacher-friendly forms, such as advanced organizers, team contracts for STEM PBL, and rubrics for assessing PBL in a larger format.
