~~Software for Computer Control is a collection of papers and lectures presented at the Second IFAC/IFIP Symposium on Software for Computer Control, held in Prague, Czechoslovakia in June 1979. The symposium is organized with the hope of making vital contributions to the development of the computer sciences. The text focuses on the design and programming of process control systems used in various industrial processes and experiments. Topics covered include communication control in computer networks; program generators for process control applications; methods for the design of control software; presentations on software for microprocessors; real-time languages; algorithms for computer control; and applications of computer control in sciences. Computer scientists, systems analysts, programmers, and students of computer science will benefit from this book.~~

~~TRAC: Trends in Analytical Chemistry. Volume 9 provides information pertinent to the trends in the field of analytical chemistry. This book discusses a variety of topics related to analytical chemistry, including flow chemography, condensation polymers, sedimentary organic matter, nucleosides, and fuzzy expert systems. Organized into 43 parts encompassing 87 chapters, this volume begins with an overview of particle induced X-ray emission and its analytical applications. This text then discusses direct memory access data acquisition, which is an efficient method of collecting data from analytical instrumentation. Other chapters consider the application of flow injection analysis in industrial research laboratory. This book discusses as well the utilization of the time-of-flight mass spectroscopy method. The final chapter deals with brassinosteroids, a group of steroidal plant growth substances that possess B-ring lactone and two vicinal diols. This book is a valuable resource for analytical chemists, biochemists, molecular biologists, physicists, engineers, scientists, and researcher workers.~~

~~A radical new management model for twenty-first century leaders Organizations today face a crisis. The crisis is of long standing and its signs are widespread. Most proposals for improving management address one element of the crisis at the expense of the others. The principles described by award-winning author Stephen Denning simultaneously inspire high productivity, continuous innovation, deep job satisfaction and client delight. Denning puts forward a fundamentally different approach to management, with seven inter-locking principles of continuous innovation: focusing the entire organization on delighting clients; working in self-organizing teams; operating in client-driven iterations; delivering value to clients with each iteration; fostering radical transparency; nurturing continuous self-improvement and communicating interactively. In sum, the principles comprise a new mental model of management. Author outlines the basic seven principles of continuous innovation The book describes more than seventy supporting practices Denning offers a rethinking of management from first principles This book is written by the author of The Secret Language of Leadership—a Financial Times Selection in Best Books of 2007.~~
