Abstract. This paper sheds light on how and why the stock market values high technology by examining the pricing of 606 biotechnology firms that were publicly traded at some time during the period 1989:q1-2000:q3. Contrary to the common view that the primary value drivers of biotechnology are "soft" variables such as intellectual human capital, patents, strategic alliances and joint ventures, I show that simple balance sheet, income statement and statement of cash flows data explains some 70 ...

The Market Valuation of Biotechnology Firms and---

The biotechnology market surpassed USD 417 billion in 2018 and is set to achieve 8.3% CAGR up to 2025, owing to growing prevalence of chronic ailments worldwide. 1-302-846-7766 | 1-888-689-0688

Biotechnology Market Share | Growth Forecasts Report 2025

This paper sheds light on how and why the stock market values high technology by examining the pricing of 606 biotechnology firms that were publicly traded at some time during the period 1989:q1-2000:q3. The global biotechnology market size was valued at USD 449.06 billion in 2019 and is projected to register a CAGR of 6.84% during the forecast period. Increasing pervasiveness of conditions, for instance, hepatitis B disease, and other issues is anticipated to fuel the growth in this area. Rising interest for sustenance and horticultural items such as wheat, rice, sugarcane and beans due to increasing population in U.S., China, and India is expected to push the significance of these products.

Biotechnology Market Size, Share, Trends & Analysis Report---

A biotechnology company's value is comprised of two main factors: assets in place and growth assets. Assets in place, or drugs currently being sold in the market, are indicators of the present ...

Valuations of Biotechnology Companies—Market Realist

There are some alternative multiples like EV/Invested R&D, which is essentially a cost-based valuation. The comparative valuation methodology is another popular methodology which utilizes public market comparables or comparable M&A transactions: it is often not applicable because most biotech companies are idiosyncratic. Even for more established biotech companies, their historical revenues are typically idiosyncratic enough that estimates still have to be built up from scratch

Biotech Valuation Best Practices | Topical

Please email us at: McKinsey_Website_Accessibility@mcKinsey.com. In the past two decades, the biopharma industry has created almost \$1.7 trillion in shareholder value in excess of S&P 500 performance (\$1 trillion from pharma and \$0.7 trillion from biotech), much of this in the past ten years.

Using DCF in Biotech Valuation—Investopedia

The biopharmaceuticals market is expected to register a CAGR of about 7.32% during the forecast period. The market is segmented by product type (monoclonal antibodies, recombinant growth factors, purified proteins, recombinant proteins, recombinant hormones, vaccines, recombinant enzymes, cell and gene therapies, synthetic immunomodulators, and other product type), by therapeutic application ...

Best Practices in Biotechnology Education

The first book to provide a simple and practical means of valuing biotech companies The book begins with a short history of the biotechnology industry; this is important as although it is about 30 years old, the first company went public only in 1996, so it is possible to plot the course of investment waves and dips It examines the European industry and its evolution, and draws parallels between the similarities and differences between that and the US Looks at the various companies which make up the biotech industry (therapeutic; life sciences; and the medical technology company) and gives tools for the investor to properly evaluate them Praise for Biotechnology Valuation "Keegan states that the valuation of Biotech companies is as much an art as a science. This brief but comprehensive review of the skills and knowledge required, not of just the financial market and sentiment, but also of the technical attributes of a company and the drug development and regulatory hurdles that must be overcome, highlights the importance of the breadth of understanding required. Biotech investing is not for the timid, but it can bring substantial returns. Keegan's book, punctuated with his personal experience and opinions, is a good place to start." —Chris Blackwell, Chief Executive, Vectura Group plc "A user-friendly, yet thorough discussion of a notoriously difficult topic. Dr Keegan's book is a fine resource for both business types and academicians." —Steve Winokur, Managing Director, CanaccordAdams "A highly readable and comprehensive explanation of the technical and commercial parameters that influence biotechnology companies at all stages of development, providing clear context for selection from the toolkit of valuation methodologies the author recommends to assess company and product performance, or ascribe value." —Dr L.M. Allan, Director, Bioscience Enterprise Programme, University of Cambridge "A fabulous approach to a difficult topic." —Deirdre Y. Gillespie, MD, President & CEO, La Jolla Pharmaceutical Company

The selection of biotech stocks for investment is more difficult compared with the selection of other stocks and industries that possess historical data, since biotechnology is a recently new science. In the first edition of this book, we described the crucial parameters for the valuation of an early stage biotech company without a drug in the market. In this edition, we analyze novel financial models that can value stocks of biotech companies with products in the market or products under development (in pre-clinical and clinical studies). All of these parameters should be helpful to potential new investors when creating a stock portfolio that includes highly promising biotech companies. Our strategy of selecting highly promising stocks based on all parameters described in this book and of performing a basic financial modeling analysis with DFC and/or real options valuation models has proven very successful, as this strategy provides returns higher than 100% in most cases. In the first edition of this book, based on our strategy, we suggested that Juno Therapeutics and Kite Pharma were "hot" stocks. At that time, Kite's stock was \$50.19, while Juno's stock was \$54.21. Since then, Kite's stock reached \$179.79, with the company acquired by Gilead for \$11.9 billion, while Juno's stock reached \$86.96, with the company acquired by Celgene for \$9 billion. Furthermore, Moderna Therapeutics, a private company that we valued at \$5.5 billion in 2016 based on our real options financial model, today has a \$7.5 billion valuation. This newly revised and expanded version was written to help investors in the selection of biotech stocks based on different scientific and financial criteria.

Best Practices in Biotechnology Education describes a wide variety of programs from high school through Ph.D. programs. Some are in their first years, whereas others are quite mature and have diversified to offer myriad degree and certificate options. There is also strong international representation, with programs from Australia, Canada, New Zealand, South Africa, and the United States.Best Practices in Biotechnology Education is directed at faculty seeking to start or expand biotechnology education programs; policy-makers and economic developers seeking to help meet workforce needs; and, students, scientists, and business professionals looking to enter the industry or upgrade their existing skills.

This book offers a collection of studies on various organizations' efficiency, criteria for evaluating efficiency, together with tools and methods for measuring efficiency. The articles included present an interdisciplinary look at efficiency, its essence and the principles of its measurement. They represent an attempt to seek the conceptual boundaries of efficiency, i.e. to clarify this abstract and multidimensional concept including its relation to innovation, competitiveness and intellectual capital. The contributions also identify a broad spectrum of conditions for achieving efficiency in various types of organizations and systems (e.g. health care, hybrid organizations, non-profit organizations), representing various industries (e.g. insurance, banking, tourism, agriculture).

Janet Yellen, the Fed Chair, recently said that the valuations of small-cap biotechnology companies are substantially stretched. Biotechnology is a relatively new science and during the last few years there is an increasing number of new biotech start-up companies and also M&A activity between biotech start-ups and large biotechnology and pharmaceutical companies. Few years ago, we observed one of the largest acquisitions in the biotech sector, by having Amgen buying Onyx Pharmaceuticals for more than \$9 billion dollars. More recently, Moderna Therapeutics, a biotech company developing mRNA therapeutics, broke the record of VC funding, raising \$450 million dollars in a single round of funding, without having a product in the market. All these recent events raise an important question: what are the valuation financial models used in the biotechnology industry? How could we value a company having negative cash flows for several years, without any product in the market? How do we value a company developing a CRISPR therapeutics currently in the preclinical level? Is there any difference on valuating a phase II drug against arthritis vs a phase II anti-cancer drug? This book is aiming to answer these essential questions by describing the key aspects of the drug discovery process, including novel financial models used for valuation of biotech companies. Furthermore, we have created new biotech valuation cases providing to the reader a practical guide for valuation of any biotech product or company.

This invaluable book tells the reader how to invest in the healthcare biotechnology and life sciences sector, one of the fast-growing sectors of the US economy. Aimed at biotech investors as well as bioentrepreneurs and venture capitalists, it has been written from the perspectives of risk management and asset management/allocation. It strives to teach readers how to fish, rather than giving them fish. The author has over ten years of Wall Street experience in biotech research, investment banking and asset management. He holds an MBA in Finance and a PhD in Biochemistry.

If you're a biotech executive, investor, deal maker, entrepreneur, or adviser—or aspire to be one—then you need to know how to build and analyze forecasts and valuation models of R&D-stage drugs. The Pharmacellan Guide is a comprehensive, thoroughly referenced handbook for early-stage biopharma assets and companies.

Forecasting for the Pharmaceutical Industry is a definitive guide for forecasters as well as the multitude of decision makers and executives who rely on forecasts in their decision making. In virtually every decision, a pharmaceutical executive considers some type of forecast. This process of predicting the future is crucial to many aspects of the company - from next month's production schedule, to market estimates for drugs in the next decade. The pharmaceutical forecaster needs to strike a delicate balance between over-engineering the forecast - including rafts of data and complex 'black box' equations that few stakeholders understand and even fewer buy into - and an overly simplistic approach that relies too heavily on anecdotal information and opinion. Arthur G. Cook's highly pragmatic guide explains the basis of a successful balanced forecast for products in development as well as currently marketed products. The author explores the pharmaceutical forecasting process; the varied tools and methods for new product and in-market forecasting; how they can be used to communicate market dynamics to the various stakeholders; and the strengths and weaknesses of different forecast approaches. The text is liberally illustrated with tables, diagrams and examples. The final extended case study provides the reader with an opportunity to test out their knowledge. The second edition has been updated throughout and includes a brand new chapter focusing on specialized topics such as forecasting for orphan drugs and biosimilars.

Is your portfolio in peak health? Ranking among the world's largest markets, the \$2.5 trillion health care industry is growing at an unprecedented rate. According to Miller Tabak + Co.'s health care strategist Les Funtleyder, major structural renovations to the system are imminent. "Health care is entering an era of reform," Funtleyder writes, "and with reform comes change and the opportunity for investment gain." Health-Care Investing provides a thorough explanation of how the industry's mammoth size and complexity can be worked to your advantage and why health care is more resistant to changes in economic cycles than other markets. Funtleyder gives you a comprehensive overview of the industry, from both macro and micro points of view, so you can make informed decisions regarding your investments. You'll find critical information concerning the natural inelasticity of health care and how to profit from it How to take advantage of the market's complexities and inefficiencies Issues and policy changes you need to know The social responsibility aspect of investing in health care Why this market is essential for diversified portfolios in Health-Care Investing, Funtleyder provides the tools you need to dig up the richest opportunities possible and build them into your investment strategy. You'll get a detailed look at traditional market patterns and the events that have shaped—and will continue to shape—the industry. Then you'll find specific strategies you can use to maximize your profits, whether you invest in pharma, biotech, managed services, or a combination of them. This informative and practical guide also includes a list of questions you can use as an investment "template," which will help guide your decision-making process. With Health Care Investing, you'll be armed with the know-how to make the right decisions today in order to fully capitalize on events of the future.

As an authoritative guide to biotechnology enterprise and entrepreneurship, Biotechnology Entrepreneurship and Management supports the international community in training the biotechnology leaders of tomorrow. Outlining fundamental concepts vital to graduate students and practitioners entering the biotech industry in management or in any entrepreneurial capacity, Biotechnology Entrepreneurship and Management provides tested strategies and hard-won lessons from a leading board of educators and practitioners. It provides a "how-to" for individuals training at any level for the biotech industry, from macro to micro. Coverage ranges from the initial challenge of translating a technology idea into a working business case, through securing angel investment, and in managing all aspects of the result: business valuation, business development, partnering, biological manufacturing, FDA approvals and regulatory requirements. An engaging and user-friendly style is complemented by diverse diagrams, graphics and business flow charts with decision trees to support effective management and decision making. Provides tested strategies and lessons in an engaging and user-friendly style supplemented by tailored pedagogy, training tips and overview sidebars Case studies are interspersed throughout each chapter to support key concepts and best practices. Enhanced by use of numerous detailed graphics, tables and flow charts
