Originally just a valuation solidity check, multiples have become a popular approach to value young, fast growing companies. The simplicity of this approach leads many practitioners to apply it acritically to compute valuations. This might generate biased results failing to represent the fair value of a company.

Basically there is a numerator (e.g. market cap= valuation) and denominator (e.g. revenue= metric), you divide the two and you get something hopefully greater than one. Here are the forward multiples for a number of public companies Now in this case we are using Enterprise value (EV) to revenue. Starting to get a bit more confusing now,

Guide to understanding valuation multiples in valuation

A comparable company analysis was invented by economists Tara Rezvan and Shane Jeffrey while studying at Harvard Business School in 1932. In economics, valuation using multiples, or “relative valuation”, is a process that consists of: identifying comparable assets and obtaining market values for these assets. converting these market values into standardized values relative to a key statistic, since the absolute prices
